

Esthetic Restoration with Edelweiss Crowns: A Case Report

A 5 years old male patient named Sharvik reported to the department of pediatric and preventive dentistry with the chief complaint of blackish discoloration in the front tooth region in the last 6 months. Based on the clinical and radiographic examination a final diagnosis of early childhood caries is given. Treatment which was done was pulpectomy Irt 52,62 followed by post placement and tooth preparation after which edelweiss crowns were placed Irt 52,62.
